## PRESIDENT'S MESSAGE

Photography was invented more than 150 years ago and each year since then man has been awed by the technological advances. Be that as it may regardless of whether you are using a pinhole camera or the latest digital gizmo we are all photographers. The images we create do not come from our camera but from within ourselves.

This membership directory serves to unite all our photographers and ensures that we can share our visions and we thank our sponsors for their assistance.

**SUPER-FINE GRAIN**

RMS granularity of 8, offering photographers significantly finer grain than even low-speed films in the ISO 25 and 50 range.

**EXCELLENT PUSH/PULL-PROCESSING**

The new film maintains natural colour and contrast from a -1/2 stop pull (EI 70) to a +2 stop push (EI 400).

**VIVID, FAITHFUL COLOUR REPRODUCTION**

Blues, greens, and reds - the primary colours that first catch the eye - show attractive brilliance and saturation.

**RICH TONAL RENDITION**

Highlights to shadows, Provia 100F (RDP III) yields smooth, natural gradations throughout its tonal range.

**EXTENDED EXPOSURE FREEDOM**

In low-light situations, superior reciprocity characteristics minimize changes in film speed and colour shift at long exposure times.

**EASY HANDLING AND USE**

Both raw and exposed film are highly stable in storage, and are compatible with worldwide-standard CR-56/E-6 processing.
